

# 5 Essential Cyber Awareness Tips

Quick Actions to Improve Your Business Security

**Follow these 5 key steps to enhance your cybersecurity posture:**

**AwareSecureCo**

1. Use Strong, Unique Passwords + Enable MFA
  - Problem: Weak passwords are the #1 cause of cyber breaches.
  - Quick Fix: Use password managers and enable Multi-Factor Authentication (MFA) on all important accounts.
2. Train Employees to Spot Phishing Emails
  - Problem: 91% of cyberattacks start with a phishing email.
  - Quick Fix: Train staff to check email senders, links, and attachments before clicking.
3. Keep Software & Devices Updated
  - Problem: Outdated software is a top target for hackers.
  - Quick Fix: Turn on automatic updates for all computers, phones, and business applications.
4. Back Up Your Business Data Regularly
  - Problem: Ransomware can lock you out of critical files.
  - Quick Fix: Set up automatic cloud backups and store a secure offline copy.
5. Limit Access to Sensitive Business Data
  - Problem: Too many employees having unrestricted access increases risk.
  - Quick Fix: Use role-based access controls—only allow employees access to the files they actually need.

## Your Next Steps to Cyber Readiness

### Step 1: Complete the 10-Minute Security Health Check

*Start with the quick self-assessment to identify potential security gaps in your business. Take the [online](#) health check or use the included Security Health Check in this toolkit*

### Step 2: Implement These Essential Cybersecurity Tips

*Apply these 5 key actions today and share them with your team to strengthen security awareness*

### Step 3: Continue Strengthening Your Cyber Awareness

*Cyber threats are constantly evolving—make cybersecurity a habit, not a one-time fix. Stay informed and review your security regularly!*
